

Key Benefits

- Connect health information across disciplines
- Break down barriers in patient care
- Improve efficiencies
- Understand outcomes and contributing factors
- Address the specific needs of your community

ImageTrend Health Information Hub™ (HIH™) is the connection of multiple health data sources (such as EMS, hospitals, critical care transport and billing entities), brought together by ImageTrend's robust network of products and services. We work with your community to create the right solution - *your* solution - built on industry-adopted standards, for truly connected health information.

EMS & Community Paramedicine

Establishing collaborative data exchanges promotes integrated patient care. Starting with EMS and hospitals exchanging data, more outcome information and connected health history leads to better care - no matter where the patient is. ImageTrend works with communities to develop Mobile Integrated Healthcare (MIH) and community paramedicine solutions that fit particular needs. This isn't new for ImageTrend, but it might be new for your community. It's time for us to partner to understand and connect what is right for you.

Hospitals and Emergency Rooms

Patient care is your top priority, and ImageTrend supports that through products such as Patient Registry and Resource Bridge. Connecting to other disciplines including EMS and Emergency Preparedness also allows hospitals to:

- Monitor post-discharge care
- Reduce readmission rates
- Maximize resource efficiency

Critical Care

ImageTrend's critical care components can be connected to trauma components or other pre-hospital transport services through Health Information Hub. In-flight care records can be available on the ground and shared among multiple facilities electronically. Data points are collected using industry-standard formats for billing and revenue recovery.

Emergency Preparedness

A connected community of emergency responders and healthcare providers ensures smooth operation and optimal care when disaster strikes. Maintain order and help reunite families with live status updates and communications. Hub-connected systems enhance:

- Communications command
- Patient tracking and reunification
- Hospital bed status

ImageTrend: Integration Experts

Every client has a unique set of interfaces that define their system and configuration. ImageTrend fully understands the issues involved and will prepare a detailed plan for successful implementation within reasonable timelines. The continuum of health does not reside within a single discipline, which is why ImageTrend has worked with communities to connect EMR systems based on HL7 with NEMIS compliant ePCR systems and to bridge the gap between HIEs and field-based care providers. Trust in ImageTrend to create the right solution for your community.

About ImageTrend, Inc.

ImageTrend, Inc. is dedicated to enterprise-level data management using technology. Based in the United States, ImageTrend's Web-based applications serve a variety of sectors. The company's primary product lines consist of the Emergency Data Systems Division, which services the emergency sector including EMS, fire, hospital, critical care and HIE; and the HireTouch division which services human resources professionals in higher education. ImageTrend also combines business analysis, creative design and database-driven architecture to offer the best purpose-built web applications and strategies.
