

Truly Connected Health Information

Connect your EMR with pre-hospital EMS data and registry information through ImageTrend Health Information Hub™. A bidirectional automatic exchange of data simplifies your process and provides outcome data to EMS.

Key Benefits

-  Better pre-hospital knowledge
-  Promote paramedic satisfaction
-  Reduce FTE through automated data integrations
-  Easily report and analyze all data

Hospital EMR & EMS

Collaborating with the EMS agencies that transport to your facility gives you access to pre-hospital data while providing EMS agencies with outcome data, resulting in a mutually beneficial situation. To ensure a complete account of patient care, it is imperative to have accurate information. Electronic data transfer results in fewer or no errors, and eliminates the need for manual data entry or deciphering handwriting.

Influence the Direction of Healthcare

Understanding the care a patient receives throughout the healthcare cycle gives you better knowledge of where efficiencies or processes are lacking. This allows you to influence policy change, or discover gaps where education or process change is needed. Creating reports that help you visualize not only the data your facility collects, but what other departments collect, gives you the tools you need to plan strategic initiatives.

Registry Automation

HIH integrates ImageTrend's Patient Registry solution with the hospital EMR to directly populate registries, such as trauma, stroke and STEMI.

"Using HIH to automatically populate the EMR with details from EMS has been very helpful for us. By reducing personnel labor and the amount of paper used, we have been able to use the staff's time more efficiently. The ER doctors have especially benefited, since they can quickly and easily view the prehospital data at the same time as triage notes before they work with a patient."

– Aimee, Clinical ER Manager

Flexible Exchange Methods

ImageTrend solutions include partnering with leaders in interoperability to provide various exchange methods that may be required. Exchange methods include query lookup, and automatic data exchange through direct messaging, the hospital hosted broker, web services and VPN.

Unmatched Industry Experience

ImageTrend is the leader in emergency services data collection and reporting, with 35 statewide EMS systems and a market presence in every U.S. state. The vast number of departments and hospitals using ImageTrend solutions provides the experience needed to ensure your needs and requirements are met.

The Complete Picture

Connected data opens the door to new possibilities in integrated healthcare. ImageTrend’s solutions leverage powerful software to analyze, document, alert and report using your data - making patient-centric care a reality.
