

Secure Archiving of Past Patient Data

ImageTrend Vault™ is an archival solution for protecting historical NEMESIS v2 and NEMESIS v3 patient care data. Vault is a secure and scalable solution, addressing data retention policy needs while limiting risk and potential data exposure.

Securely Retrieve Data Fast

ImageTrend Vault provides an added layer of security and management control by limiting archive access to only authorized users. Those users have the ability to perform record searches in Vault to retrieve, view and print individual care reports and historical records. All of the actions are fully logged and auditable for extra security.

Reduce Liability

Vault addresses data retention policy needs while limiting risk and potential data exposure. It provides the extra layer of security and HIPAA compliance you need, with elevated access control and logging for those that require online access.

Fulfill Archival Needs

ImageTrend offers three Vault solutions to meet your needs or state requirements. Whether you need attachments and a reporting data set archived or simply a basic NEMESIS file for potential future retrieval, we've got you covered.

Basic: NEMESIS v2, v3, ImageTrend NICE XML encrypted on physical media

Standard: Includes secure online access, client specific retention rules, audited access logging as well as multi-factor authentication

Advanced: Includes the above, as well as attachment retrieval (with some size restrictions) and the data set for reporting
