

What Makes it Elite Fire / Elite Rescue?

ImageTrend Elite™ Fire is a complete data solution for fire departments. It has everything you expect and more to conduct inspections, document fire incidents and manage fire operations.

ImageTrend Elite™ Rescue combines those fire RMS capabilities with ePCR in a single solution, making data management even easier for fire departments with EMS service.

Reporting for Your Fire and EMS Data

ImageTrend's Report Writer lets you create ad hoc or canned reports on your NFIRS 5.0 or NEMSIS v3 data. Built-in reporting tools are already designed for the reports you need.

Fluid, Configurable Forms

Create your own forms to optimize your department's workflow using ImageTrend Elite's Form Manager. Choose the fields and order of display for rapid data entry.

Most Trusted for Data Hosting

With more than 10 million NEMSIS v3 and 1,000,000 NFIRS 5.0 records hosted¹, no other singular system is as trusted as ImageTrend Elite.

Save Time with the Library

User-generated content from your peers in other departments can be shared with the Library. Find forms that others have found successful and share the wealth of knowledge in the ImageTrend community.

Centralized Data Collection Settings

Take in-depth control with centralized management of your fields, their value ranges, validation and mapping for import/export data exchange.

Locations/Occupants/Inspections Module

Expand fire operations capabilities with the Locations/Occupants/Inspections Module. Record data in this cloud-based system where it is secure and safe with backups. Update and reference records from virtually anywhere with an internet connection.

Offline Documentation with Elite Field™

ImageTrend Elite is a cloud-based system that works anywhere with an internet connection. With optional Elite Field, a building inspection or patient encounter can be started and completed offline and submitted when a connection is restored. An encrypted database on the local device keeps the data secure from unauthorized access.

Powerful for States, Flexible for Municipalities

Not only is ImageTrend chosen more than any other vendor for statewide fire or EMS data collection; it is also the most flexible for municipal and countywide departments. Enterprise architecture ensures smooth data rollup from the scene of the incident to nationwide reporting systems.

Dynamic Power Tools™ and Situation Tools™

To make short work of repetitive or complex documentation, Dynamic Power Tools and Situation Tools simplify data entry - often to as little as a tap of a button. Based on the provider's initial impression and course of treatment, these configurable tools can be selected for a scenario, such as cardiac arrest, and display common medications or procedures that might be documented.

Capabilities and Modules

Visual Informatics

MARS Mapping/Reporting

Fire Inspections

Mobile Fire Inspections

Preplanning

CQI (EMS incidents)

Staffing/Scheduling Integrations

CAD Integrations

EMS Billing Integrations

EKG Monitor Integrations

Continuum™ Integration

The Complete Picture

Connected data opens the door to new possibilities in integrated healthcare. With ImageTrend's Open Platform, encounters can be sent to hospitals or shared through Health Information Hub™ (HIH™) with other agencies, regardless of which ePCR vendor they use*. ImageTrend's solutions leverage powerful software to analyze, document, alert and report on data - making patient-centric care a reality.

* Requires each endpoint to be certified NEMIS version 3 compliant. Special data sharing agreements required - see ImageTrend rep for details.
