IMAGETREND ELITE™

AMBULANCE

What Makes it Elite EMS?

ImageTrend Elite™ does what no other solution can for EMS agencies and fire departments. It has everything you expect and more to document patient care in a single solution.
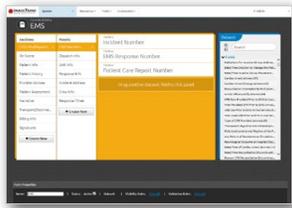

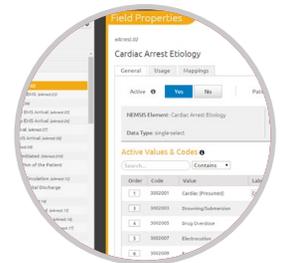

Reporting for Your EMS Data

ImageTrend's Report Writer lets you create ad hoc or canned reports on your NEMSIS v3 data. Fire departments can also get NFIRS compliant reporting in the same solution.

Centralized Data Collection Settings

Take in-depth control with centralized management of your fields, their value ranges, validation and mapping for import/export data exchange.

Fluid, Configurable Forms

Create your own forms to optimize your department's workflow using ImageTrend Elite's Form Manager. Choose the fields and order of display for rapid data entry.

Easy ICD-10 Code Selection

Elite's multi-select field groups many options into categories that can be edited in the Dataset Manager. Crews can more accurately document with a drill-down method, eliminating "close picks" for better billing.

Patient-Centric Timeline™ View

View patient information across time or multiple encounters at a glance. Selecting an event brings the user right to that data.

Consistent Experience

One solution works on Android, iPad or Windows devices for a consistent user experience and IT flexibility.

Save Time with the Library

User-generated content from your peers in other departments can be shared with the Library. Find forms that others have found successful and share the wealth of knowledge in the ImageTrend community.

Faster, Easier Data Entry

Elite is optimized for data entry in the field with tabs easily accessible by thumb from the edge of the screen. Features like Visbility Rules and the "six pack" simplify selection when six or fewer options are available, and type-ahead search gets providers through forms faster.

ELITE

Dynamic Power Tools™ and Situation Tools™

To make short work of repetitive or complex documentation, Dynamic Power Tools and Situation Tools simplify data entry - often to as little as a tap of a button. Based on the provider's initial impression and course of treatment, these configurable tools can be selected for a scenario, such as cardiac arrest, and display common medications or procedures that might be documented.

Offline Documentation with Elite Field™

ImageTrend Elite is a cloud-based system that works anywhere with an internet connection. With optional Elite Field, documentation can be completed without an internet connection. In a remote area or when infrastructure has been compromised, medics can start and complete documentation of an encounter offline and submit the report when a connection is restored. An encrypted database on the local device keeps the data secure from unauthorized access.

The Complete Picture

Connected data opens the door to new possibilities in integrated healthcare. With ImageTrend's Open Platform, encounters can be sent to hospitals or shared through Health Information Hub™ (HIH™) with other agencies, regardless of which ePCR vendor they use*. ImageTrend's solutions leverage powerful software to analyze, document, alert and report on data - making patient-centric care a reality.

* Requires each endpoint to be certified NEMSIS version 3 compliant. Special data sharing agreements required - see ImageTrend rep for details.
