

Secure Archiving of Past Patient Data

ImageTrend Vault™ is an archival solution for protecting historical NEMIS v2 patient care data. Vault is a secure and scalable solution, addressing data retention policy needs while limiting risk and potential data exposure.

Securely Retrieve Data Fast

ImageTrend Vault provides an added layer of security and management control by limiting archive access to only authorized users. Those users have the ability to perform record searches in Vault to retrieve, view and print individual care reports and historical records. All of the actions are fully logged and auditable for extra security.

Reduce Liability

Vault addresses data retention policy needs while limiting risk and potential data exposure. It provides the extra layer of security and HIPAA compliance you need, with online access only for those that require it and automatic logging of their actions.

Fulfill Archival Needs

ImageTrend Vault solution has the features to meet your needs or state requirements. We've got you covered.

-  **Store:** NEMIS v2 report data from XML format imports. When importing from an ImageTrend system, custom fields, associated attachments and the original generated PDF are also stored.
-  **Secure:** Includes secure online access, client specific retention rules, audited access logging with time/date stamp as well as two-factor authentication
-  **Search:** Search for individual records by agency; patient name; PCR, incident or response numbers; or date range to view or print as needed. Single records can be previewed or printed.
