

What Makes it Elite Rescue?

ImageTrend Elite™ Rescue combines the fire RMS capabilities with ePCR in a single solution, making data management even easier for fire departments with EMS service.

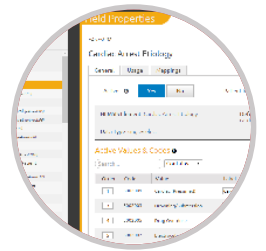

Reporting for Your Fire and EMS Data

ImageTrend's Report Writer lets you create ad hoc or canned reports on your NFIRS 5.0 or NEMSIS v3 data. Built-in reporting tools are already designed for the reports you need.

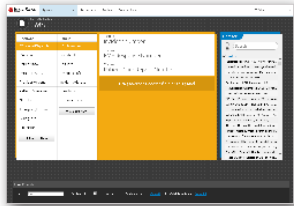

Centralized Data Collection Settings

Take in-depth control with centralized management of your fields, their value ranges, validation and mapping for import/export data exchange.

Fluid, Configurable Forms

Create your own forms to optimize your department's workflow using ImageTrend Elite's Form Manager. Choose the fields and order of display for rapid data entry.

Locations/Occupants/Inspections Module

Expand fire operations capabilities with the Locations/Occupants/Inspections Module. Record data in this cloud-based system where it is secure and safe with backups. Update and reference records from virtually anywhere with an internet connection.

Most Trusted for Data Hosting

With millions of NEMSIS v3 and NFIRS 5.0 records hosted, no other singular system is as trusted as ImageTrend Elite.

Offline Documentation with Elite Field™ and Inspections Field

ImageTrend Elite is a cloud-based system that works anywhere with an internet connection. With optional Elite Field and Inspections Field, a building inspection or patient encounter can be started and completed offline and submitted when a connection is restored. An encrypted database on the local device keeps the data secure from unauthorized access.

Save Time with the Library

User-generated content from your peers in other departments can be shared with the Library. Find forms that others have found successful and share the wealth of knowledge in the ImageTrend community.

Powerful for States, Flexible for Municipalities

Not only is ImageTrend chosen more than any other vendor for statewide fire or EMS data collection; it is also the most flexible for municipal and countywide departments. Enterprise architecture ensures smooth data rollup from the scene of the incident to nationwide reporting systems.

Dynamic Power Tools™ and Situation Tools™

To make short work of repetitive or complex documentation, Dynamic Power Tools and Situation Tools simplify data entry - often to as little as a tap of a button. Based on the provider's initial impression and course of treatment, these configurable tools can be selected for a scenario, such as cardiac arrest, and display common medications or procedures that might be documented.

Capabilities and Modules

OPERATIONAL

- Locations/Occupants/Inspections
- Inspections Field
- Hydrants
- Preplanning
- Inventory
- Checklists
- Training and Activities
- Maintenance
- Permits

ANALYTICAL

- Continuum®
- Visual Informatics
- MARS Mapping/Reporting
- CQI - EMS
- CQI - FIRE

INTEGRATIONS

- HL7/Hospital
- CAD
- Staffing/Scheduling
- EMS Billing
- EKG Monitor
- NFIRS/Inspections Billing
